There is a section for the major revision history.	1	1
Tools used for testing are explicitly identified (tools could include unit testing framework, code coverage metrics, static checkers, automated testing, load testing (like JMeter), etc.)	3	5
Identify types of tests (structural (white box), functional (black box), unit), static vs dynamic, manual versus automated.	3	5
Explain how test will be performed.	4	5
Explain plans for automated testing.	4	5
Specific system tests. All tests should be fully described in terms of initial state, input and output. Tests should be numbered and named.	7	10
System tests include tests that should generate exceptions, like trying to access a missing url, or open an nonexistent file, or attempting to solve a singular matrix, or find a solution when no feasible solutions exists.	3	5
Proof of Concept test is explicitly identified.	2	2
Schedule breaks the testing into a set of tasks	0	2
Schedule includes specific dates and specifically identifies which team members do what	1	3
System test cases are unambiguous.	2	2
System test cases build confidence that the domain is covered.	1	2
Tests for nonfunctional requirements, like usability and performance, are explicitly identified. Test could include usability testing, stress testing, performance testing, parallel testing etc. Tests could include varying an input parameter and tracking the input on performance.	7	10
Plans for unit testing - what type of tests? need for stubs or drivers? coverage metrics? tools?	7	10
